The Canary System™ from QDT and 3M ESPE Preventive Care

Reliable performance and results

The Canary System™ from QDT: Your Dental Early Warning System

The Canary System is the reliable early caries detection system that encourages patients to have active involvement in their own oral health care.

- Developed with over 10 years of research and clinical trials.
- Reads not only the occlusal surface, but every tooth surface - interproximal, as well as along margins of restorations.
- Detects lesions within and deep beneath the enamel which are too small to appear on a radiographic image.
- Monitors the progress of patients receiving 3M ESPE remineralisation therapies.

3M ESPE Preventive Care Products assist dental professionals treat and heal

3M ESPE’s line of preventive products provides the treatment required based on the caries detection provided by The Canary System. Tri-Calcium Phosphate (TCP) technology - exclusive to 3M ESPE - containing fluoride, calcium and phosphate has been customized to work both in 3M™ ESPE™ Vanish™ 5% Sodium Fluoride White Varnish and 3M™ ESPE™ Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste. They both deliver targeted and sustained fluoride and calcium release, increasing the formation of calcium fluoride on tooth surfaces, including dentin tubules, thus strengthening tooth structure.

- In-Office Treatment – Vanish™ 5% Sodium Fluoride White Varnish with TCP - NPN 80003435
- Take-Home Treatment – Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste with TCP - NPN 80012416

The Canary System...
Step 1
Early caries detection.

3M ESPE...
Step 2
Early caries treatment.
